

MODIS Estimate of Canopy Water Content

Susan L. Ustin
University of California Davis

July 14, 2004

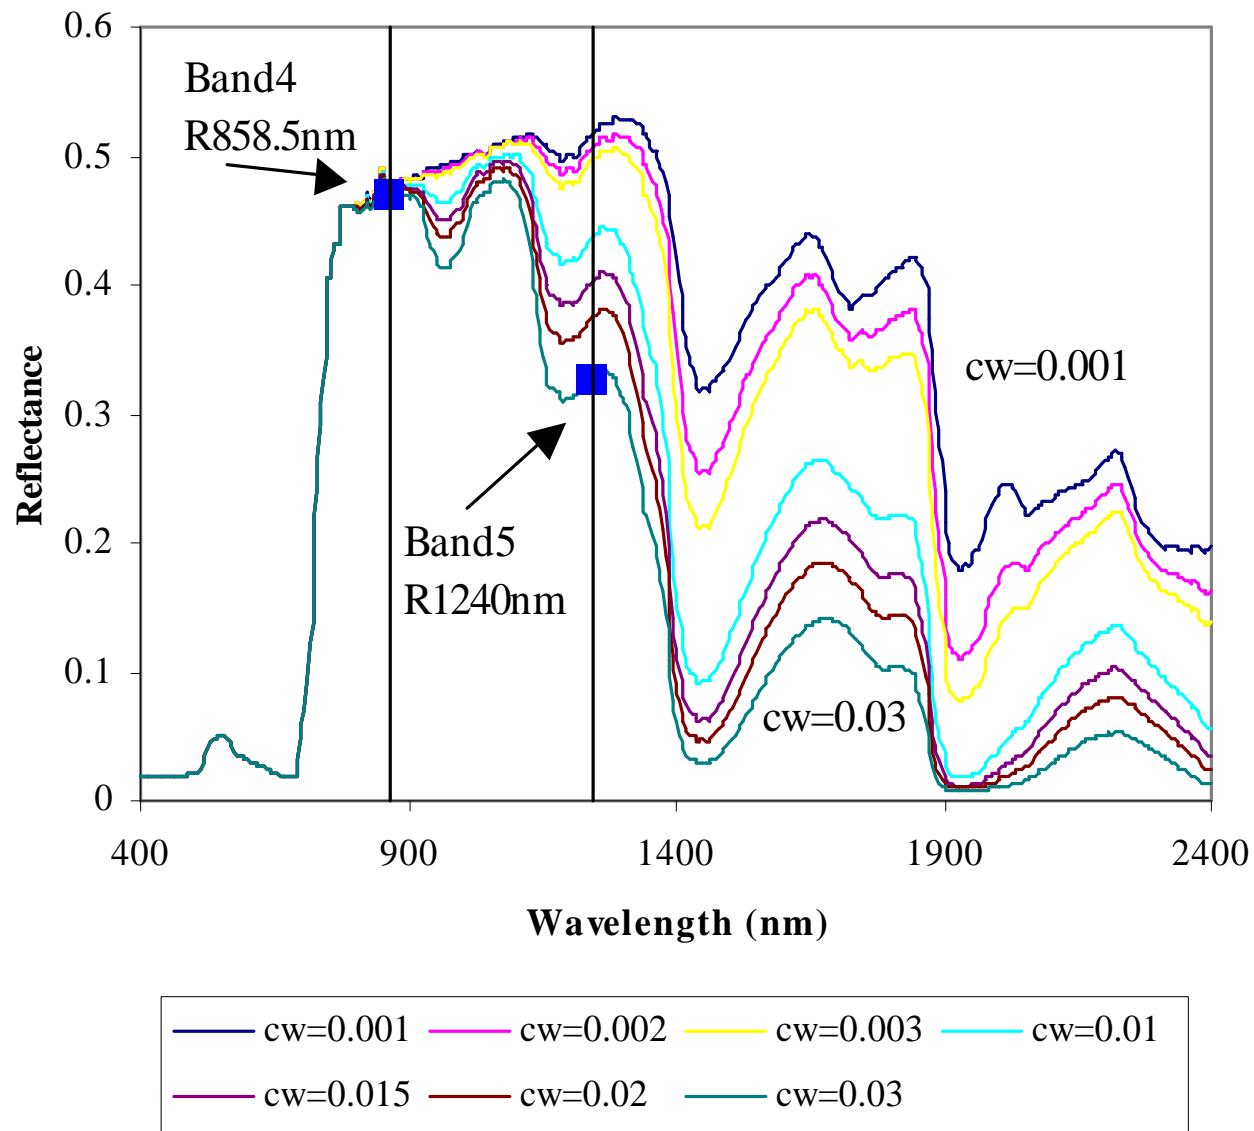

Santa Monica Mtns: Canopy Water Content

AVIRIS Composite 980 nm Water Absorption

(Ustin et al., 1999)

Cw/LAI Estimation from MODIS

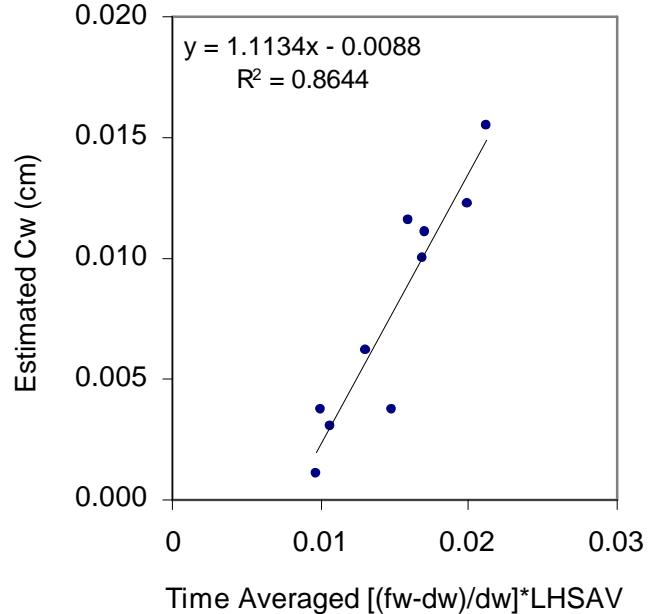

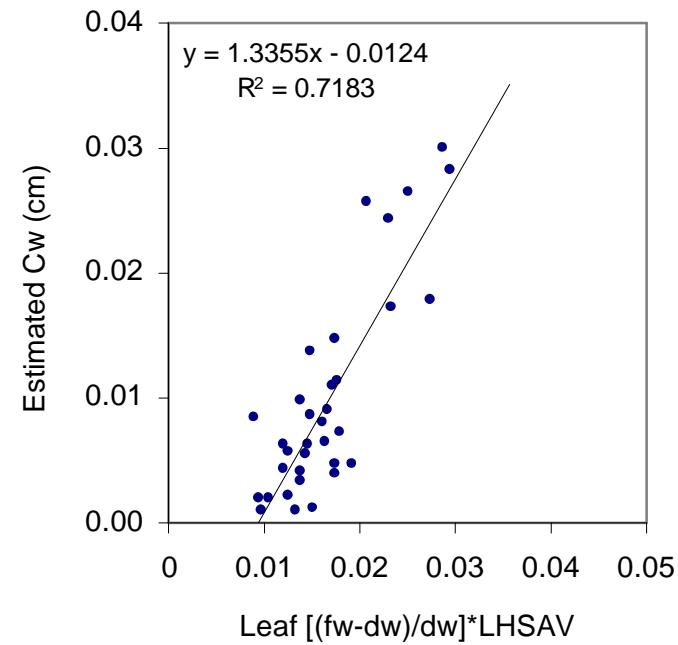

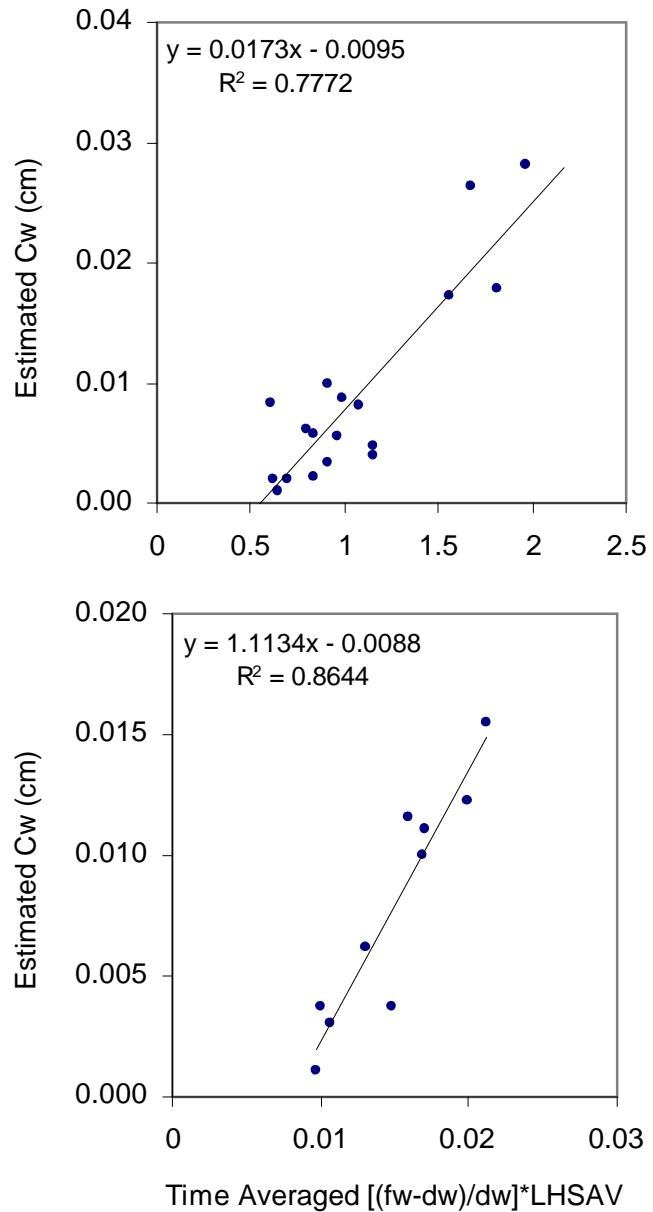

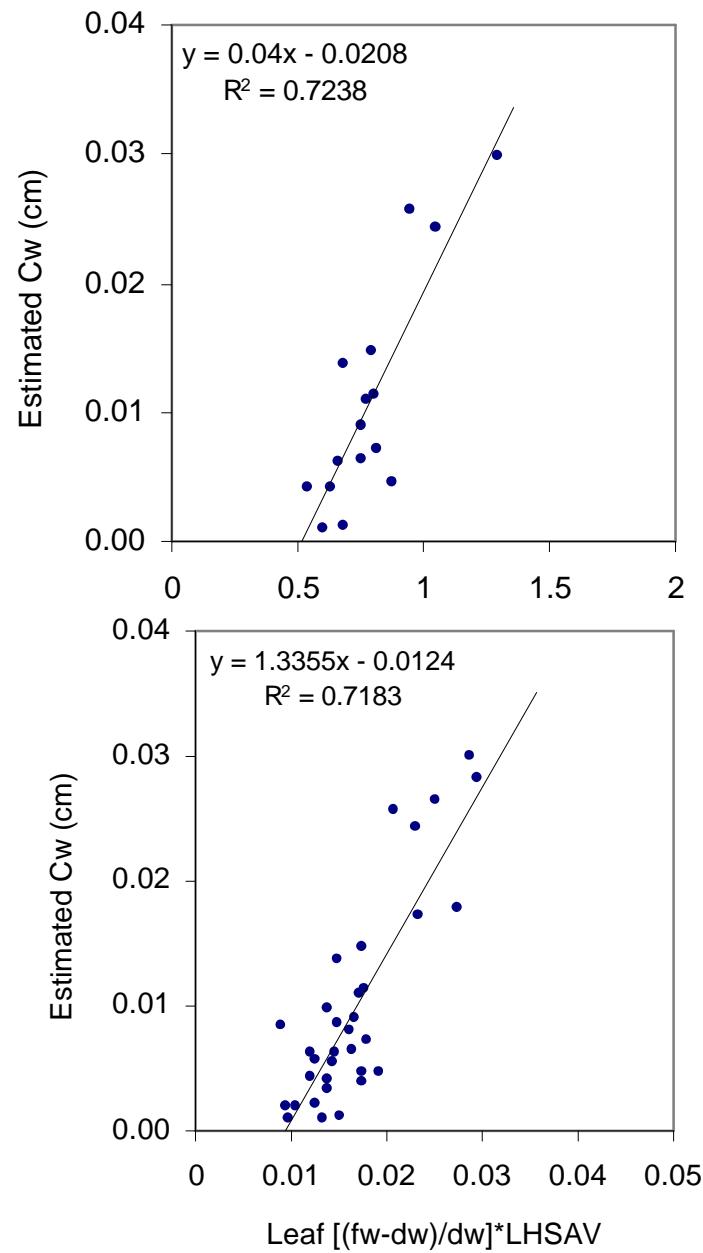

MODIS Water Index (SRWI):

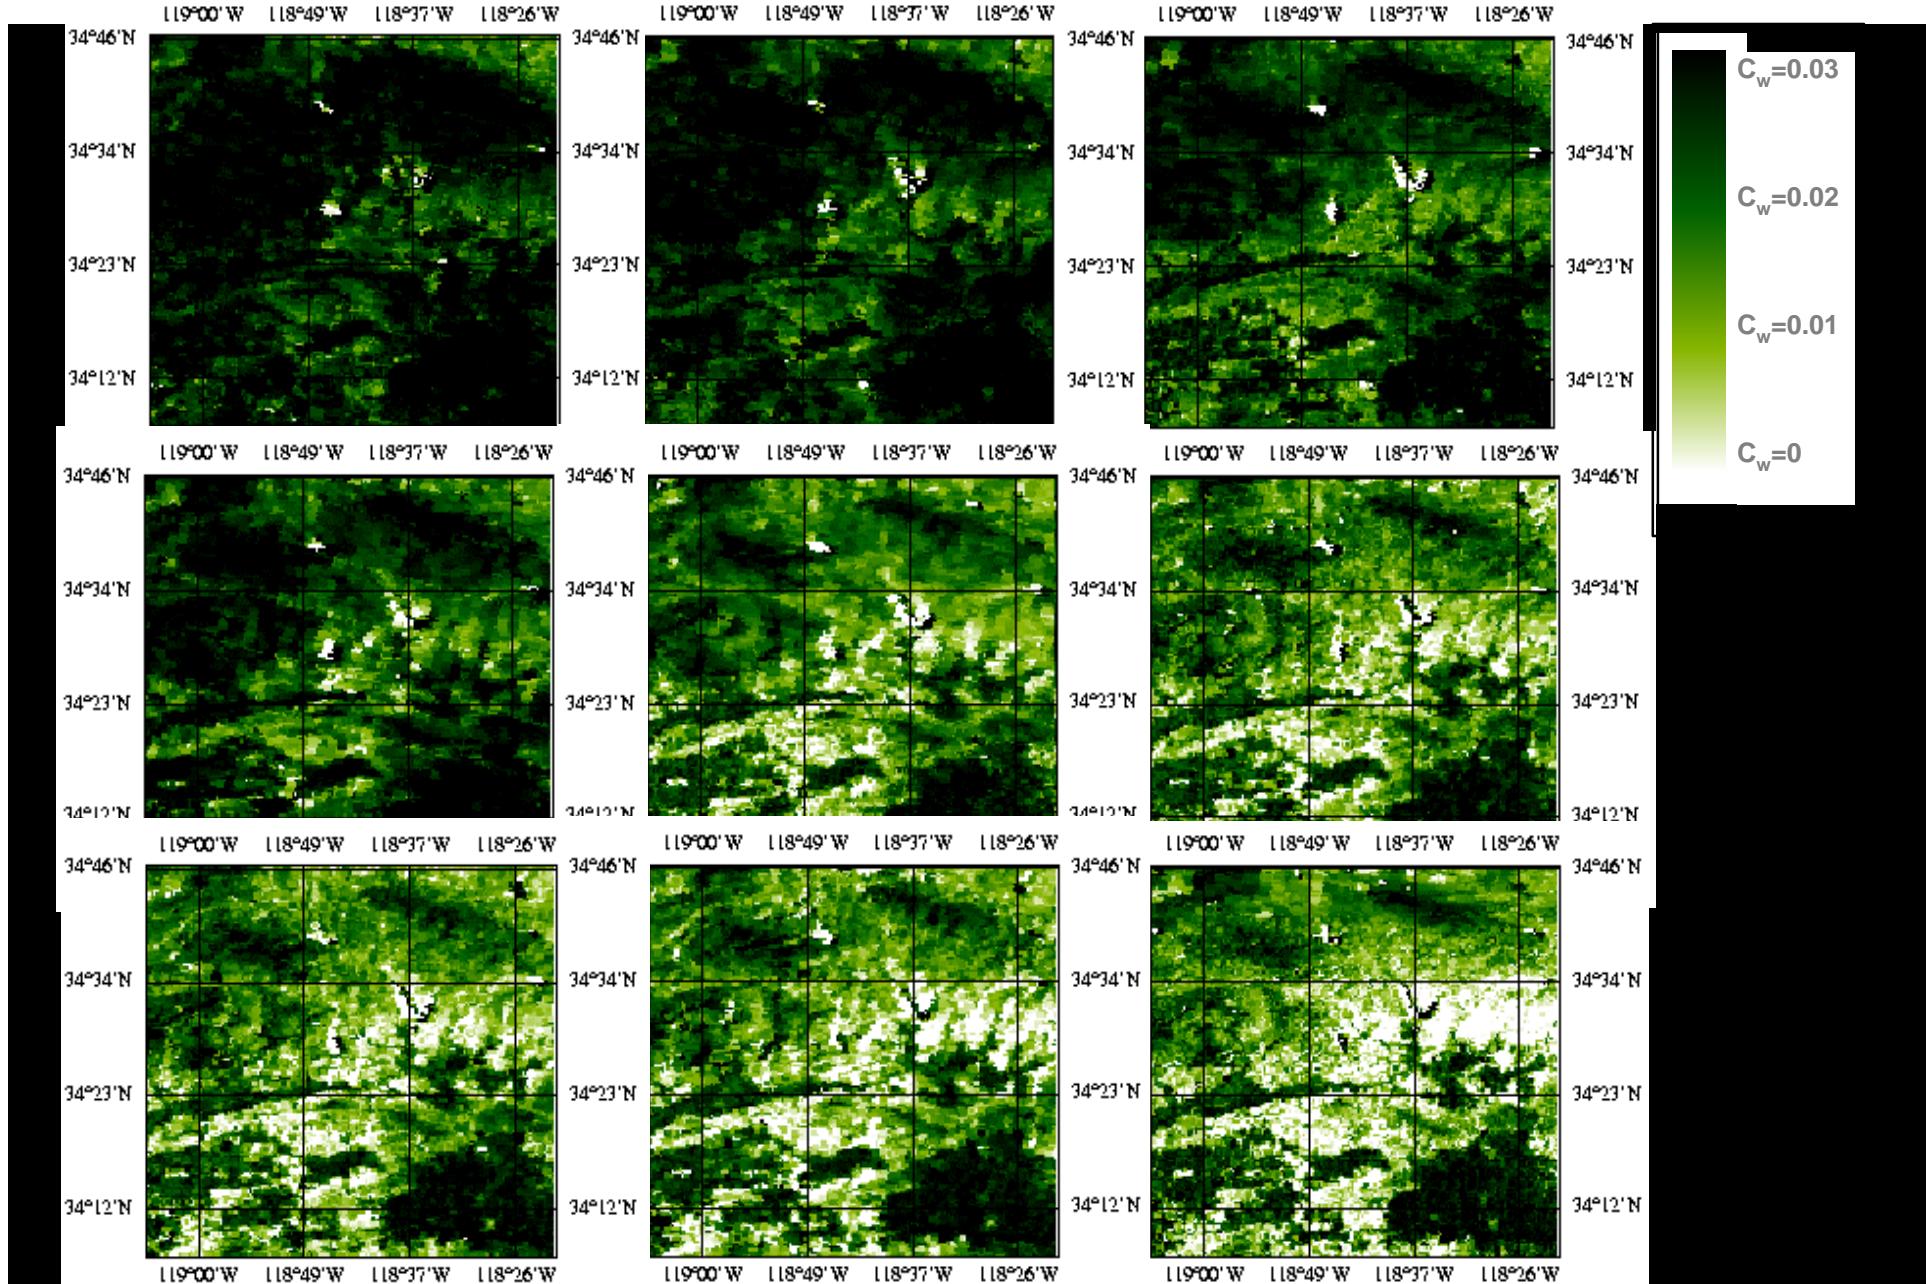

$$\text{SRWI} ? \frac{R_{858}}{R_{1240}}$$

(Pablo Zarco-Tejada *et al.*, 2001 IEEE; Rem. Sens. Env. 2003)

Comparison between Field Measured Water Content VS. MODIS Prediction

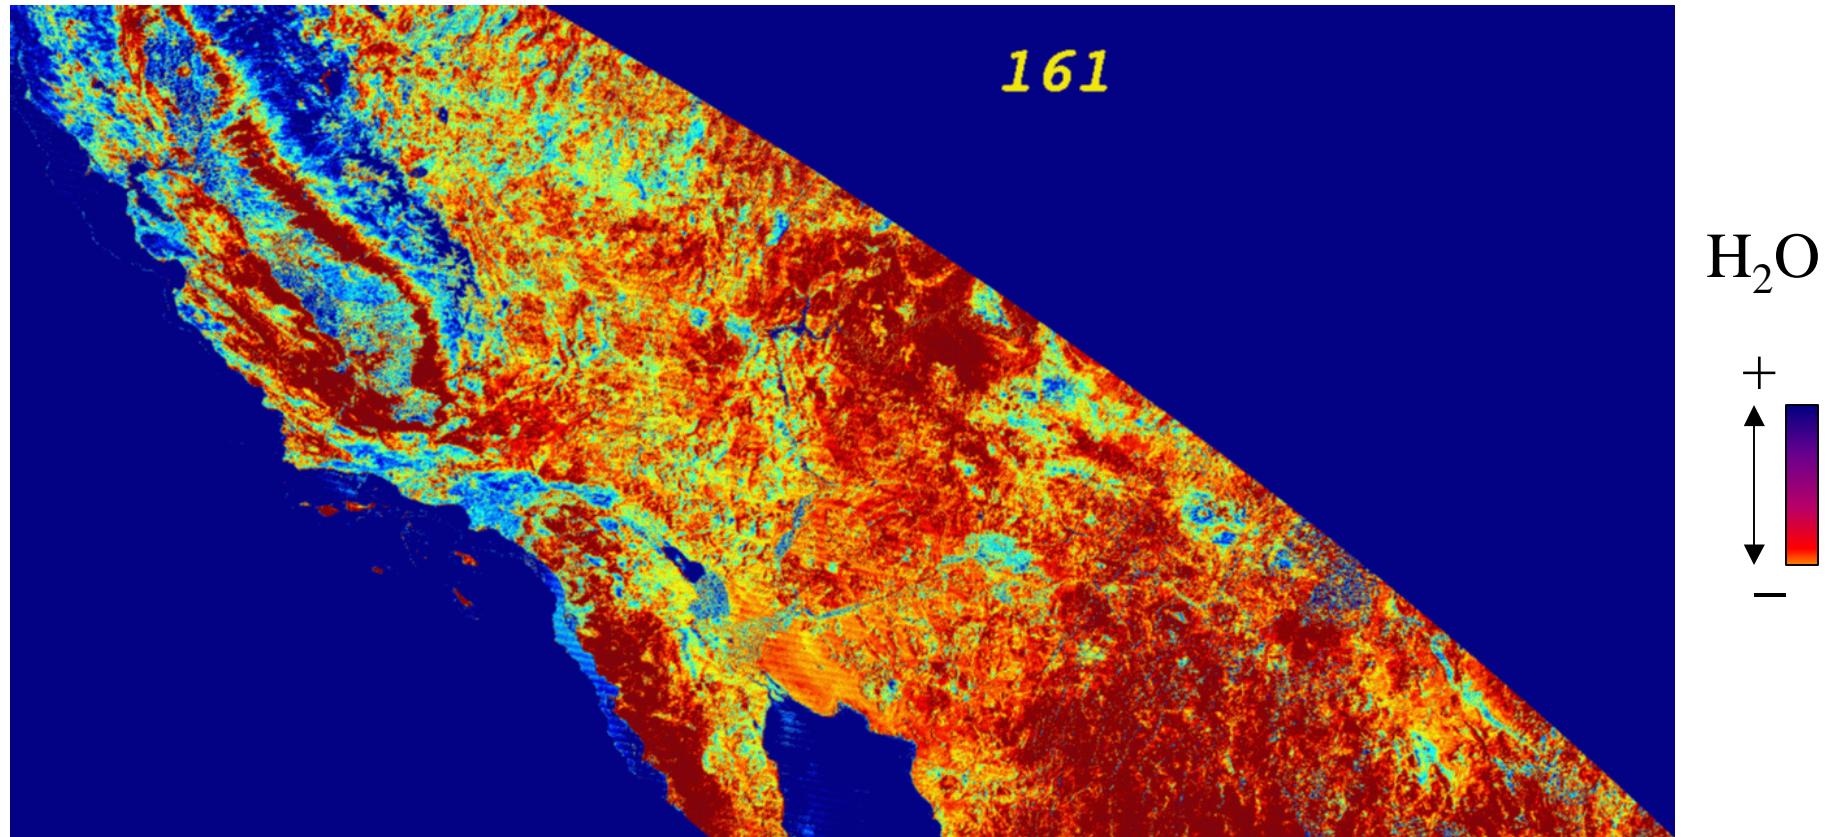

Water Content estimation from MOD09A1: seasonal variation

(Zarco-Tejada *et al.*, 2003 Rem. Sens. Env.)

Seasonal Drought and Wildfire Potential

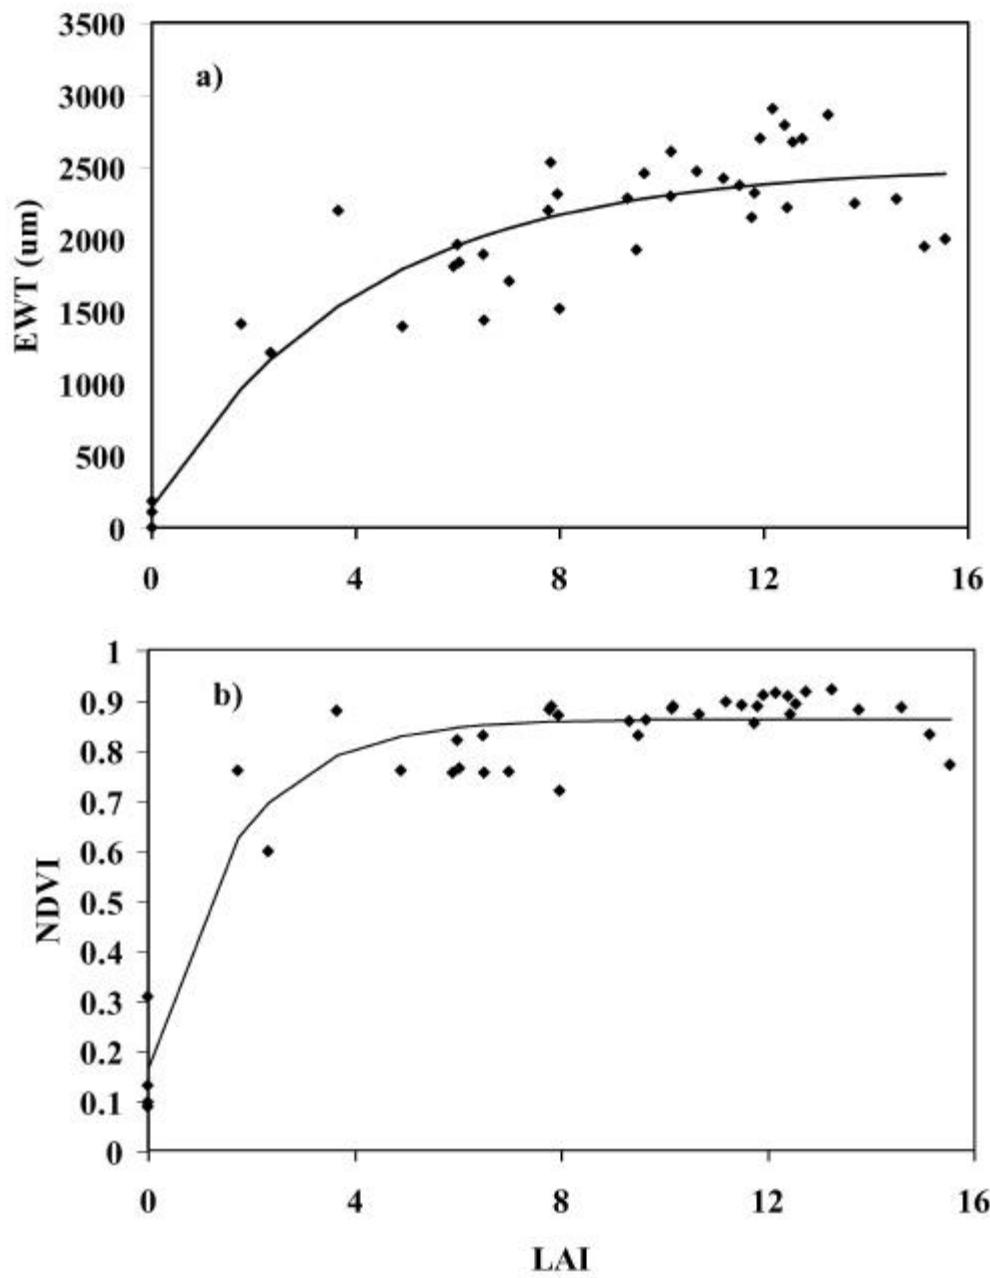

Canopy water content in Southern California Vegetation
Measured by MODIS Satellite

Canopy Water Content

- Estimates of LAI
- Estimates of Plant Water Stress
- Estimates of Wildfire Fuel Moisture Content

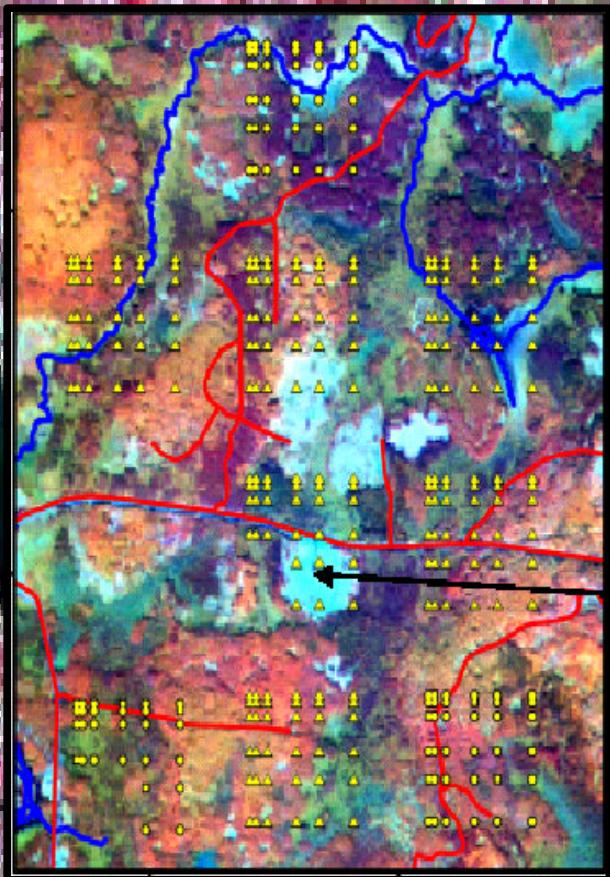

LAI
Estimated by
NDVI VS EWT

Wind River
Ameriflux Site

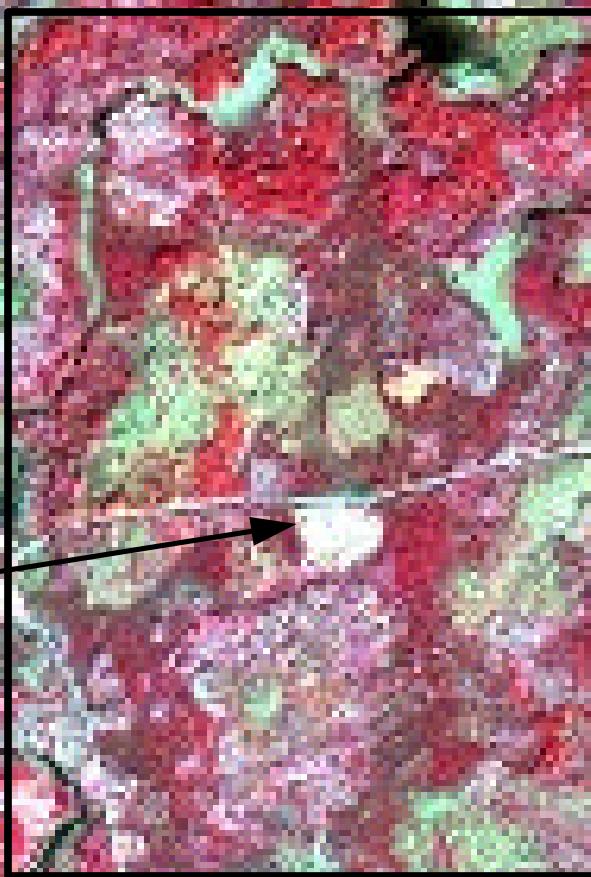

Roberts et al., Ecosystems 2004

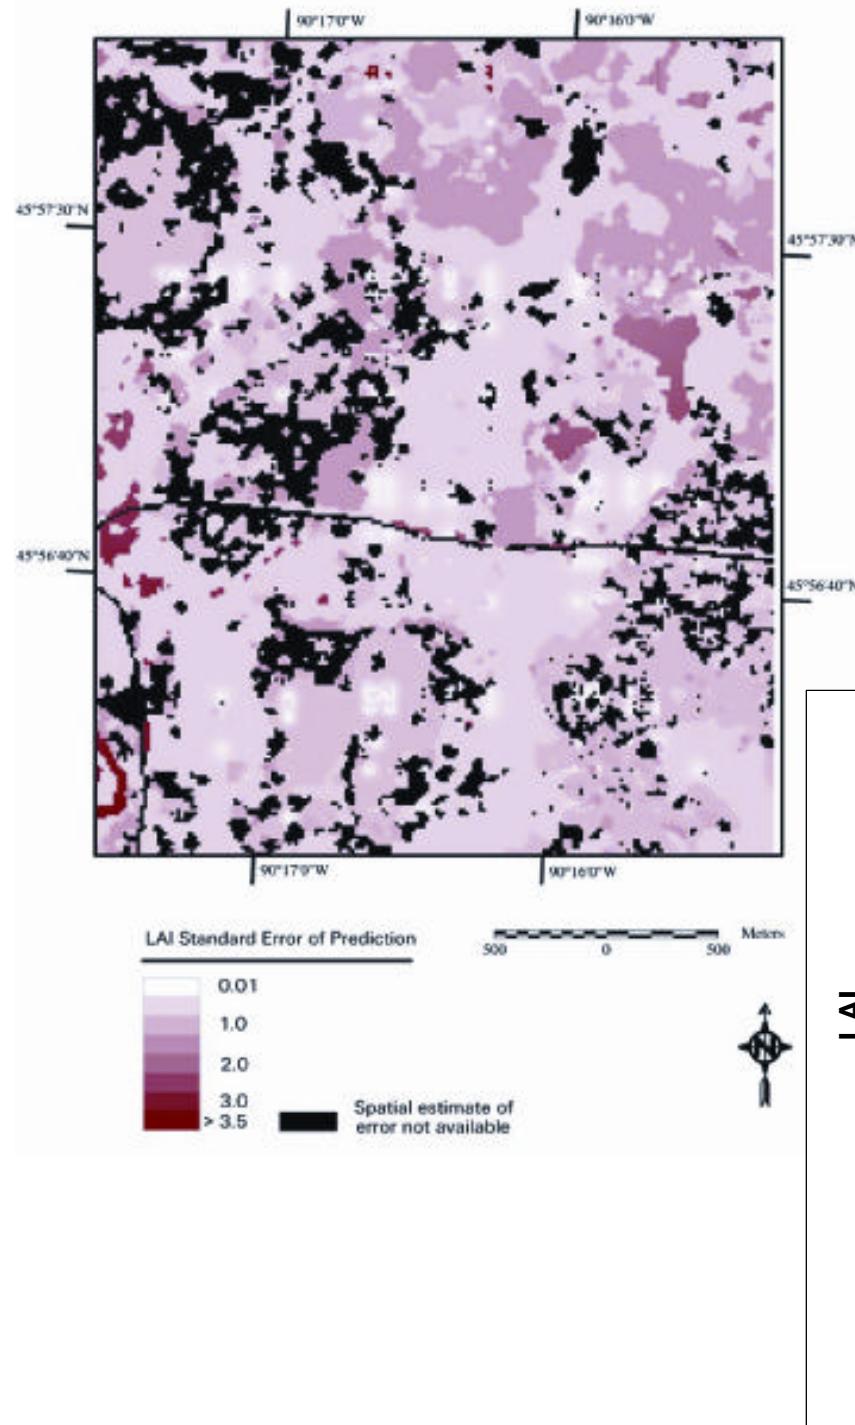

Wisconsin Tall Tower Flux Site

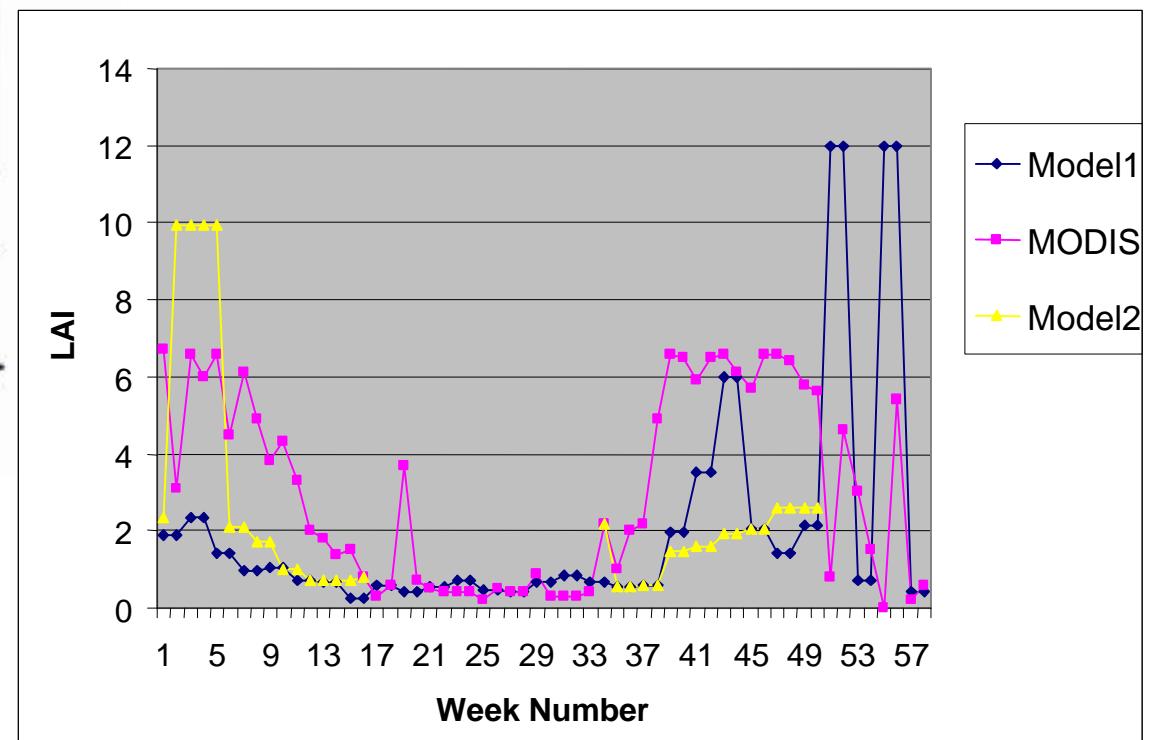

S.N. Burrows et al.
Ecosystems 2002

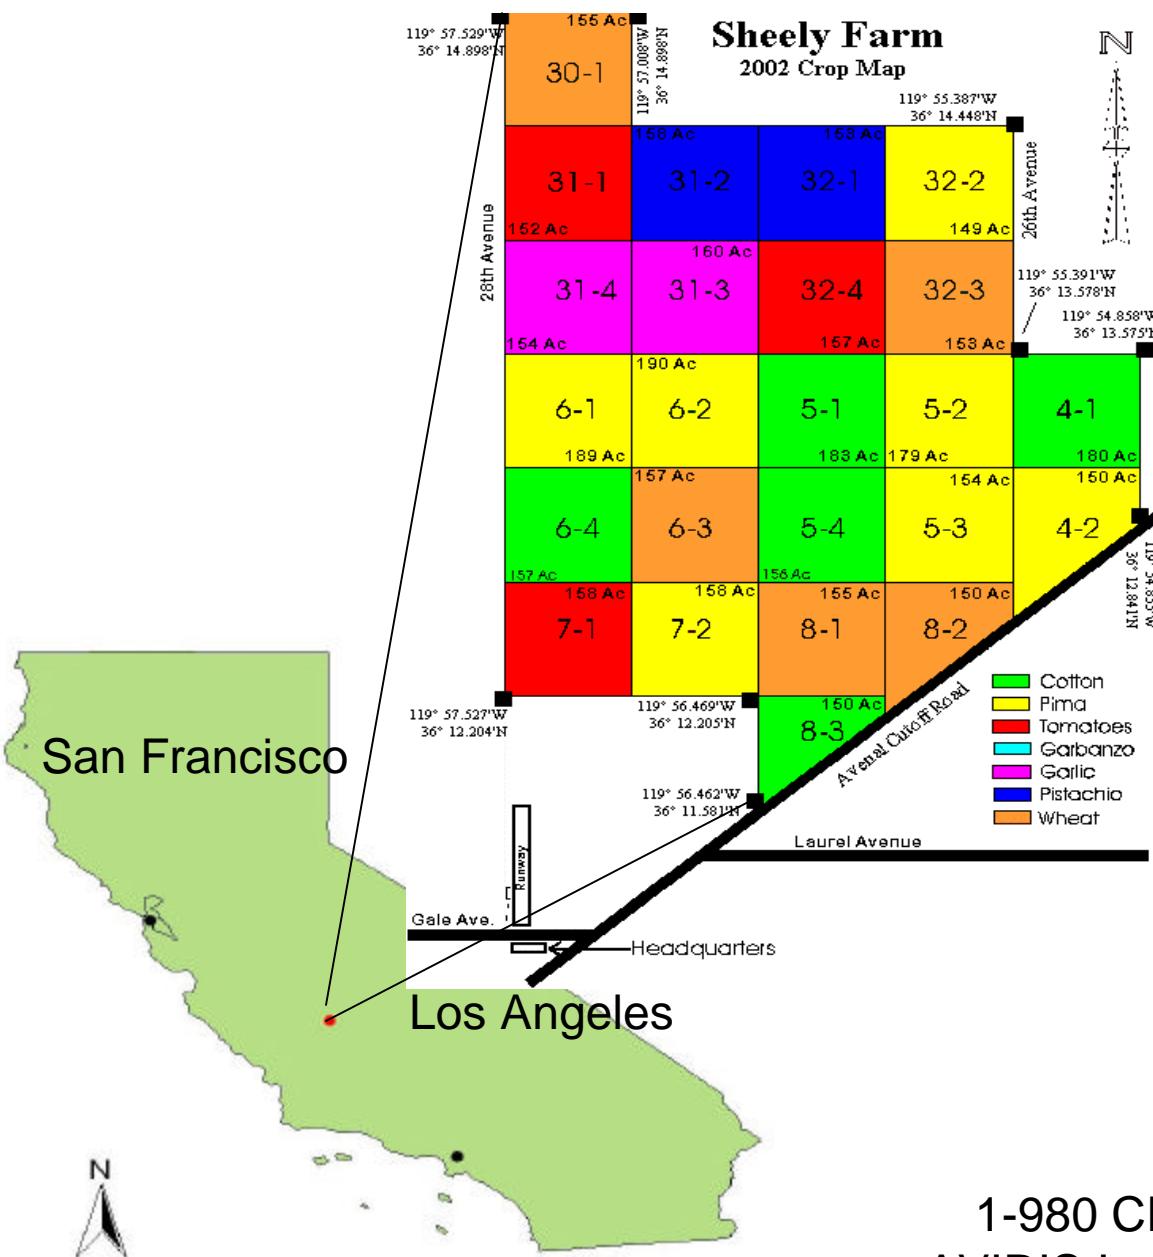

MODIS Data 2000-2001

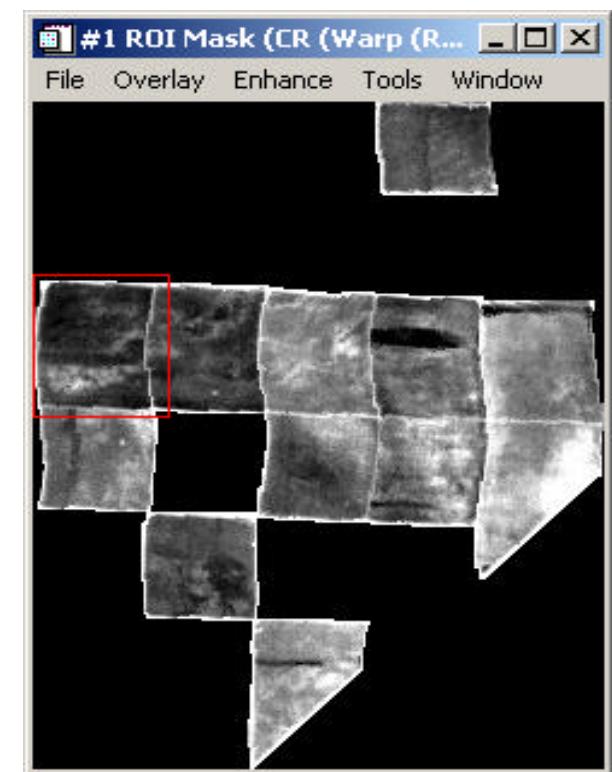

Estimate of LAI from MODIS Water Content vs. MOD09A1

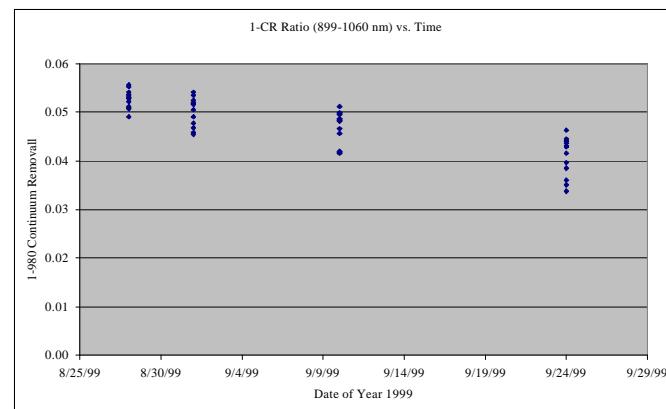

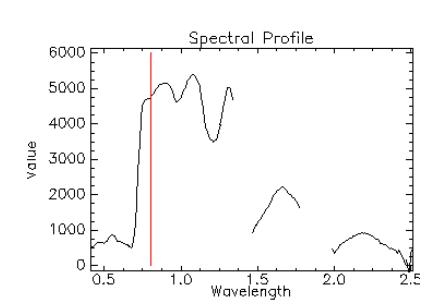

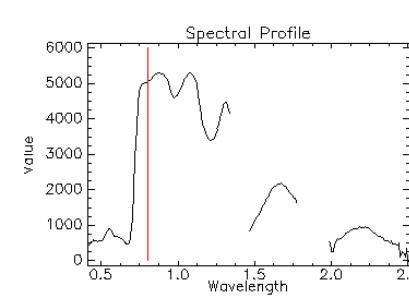

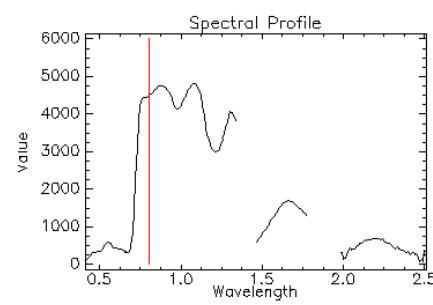

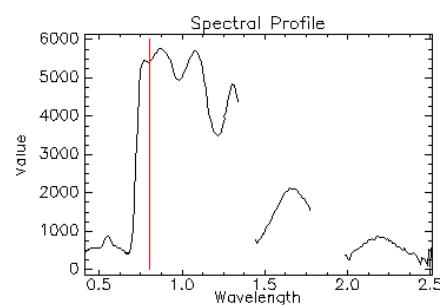

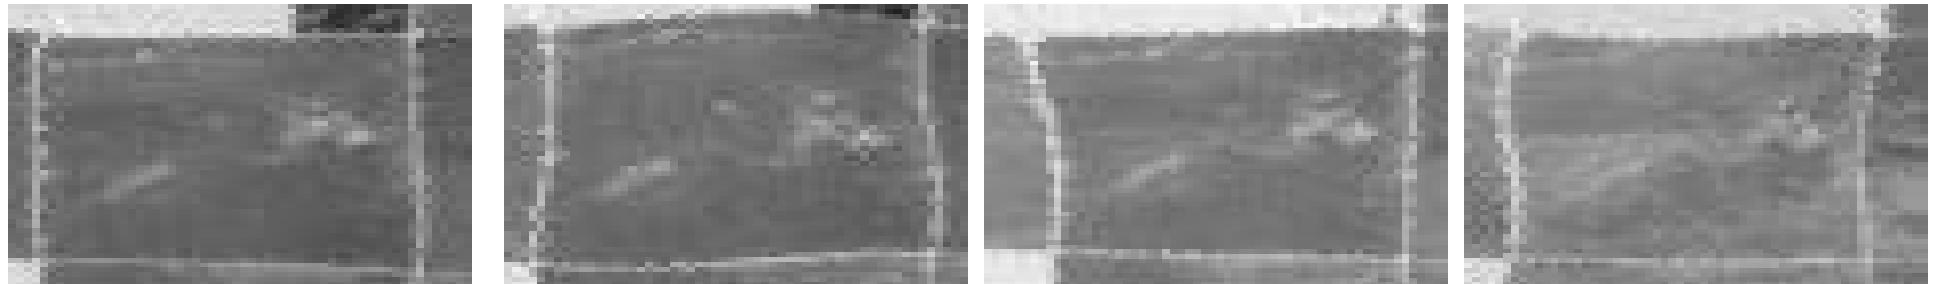

Estimating Water Stress From Water Content

1-980 CR
AVIRIS Image

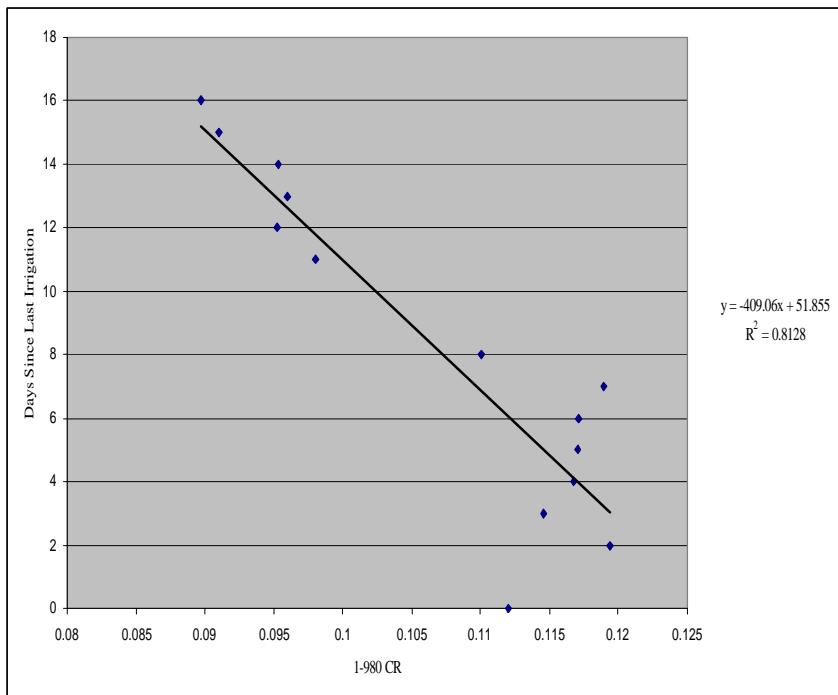

Changes in Canopy Water Content after Irrigation Cutoff

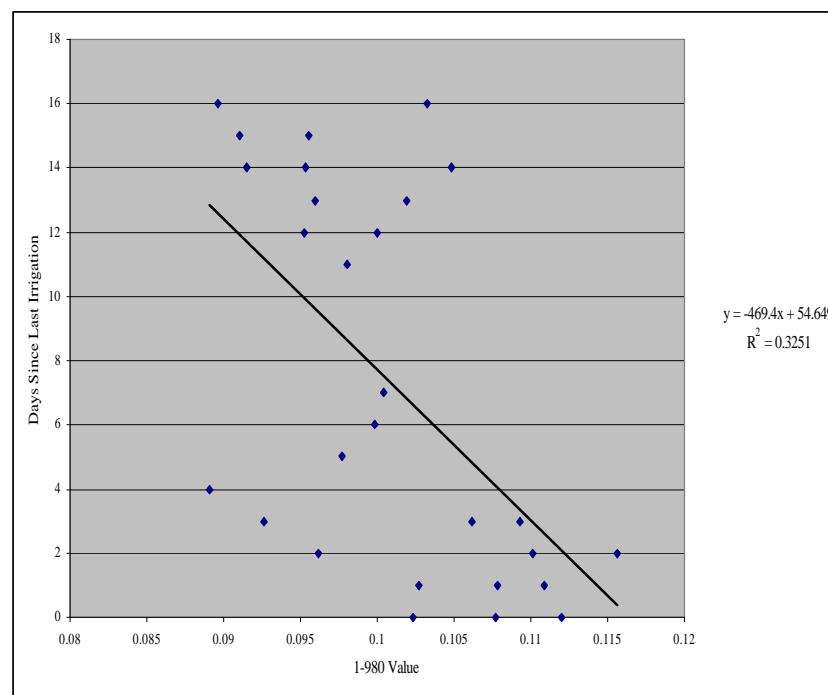

+ Water
- Water

A vertical color scale bar ranging from white (bottom) to black (top), representing the range of canopy water content from -Water to +Water.

Within Field Water Content vs. Days Since Last Irrigation

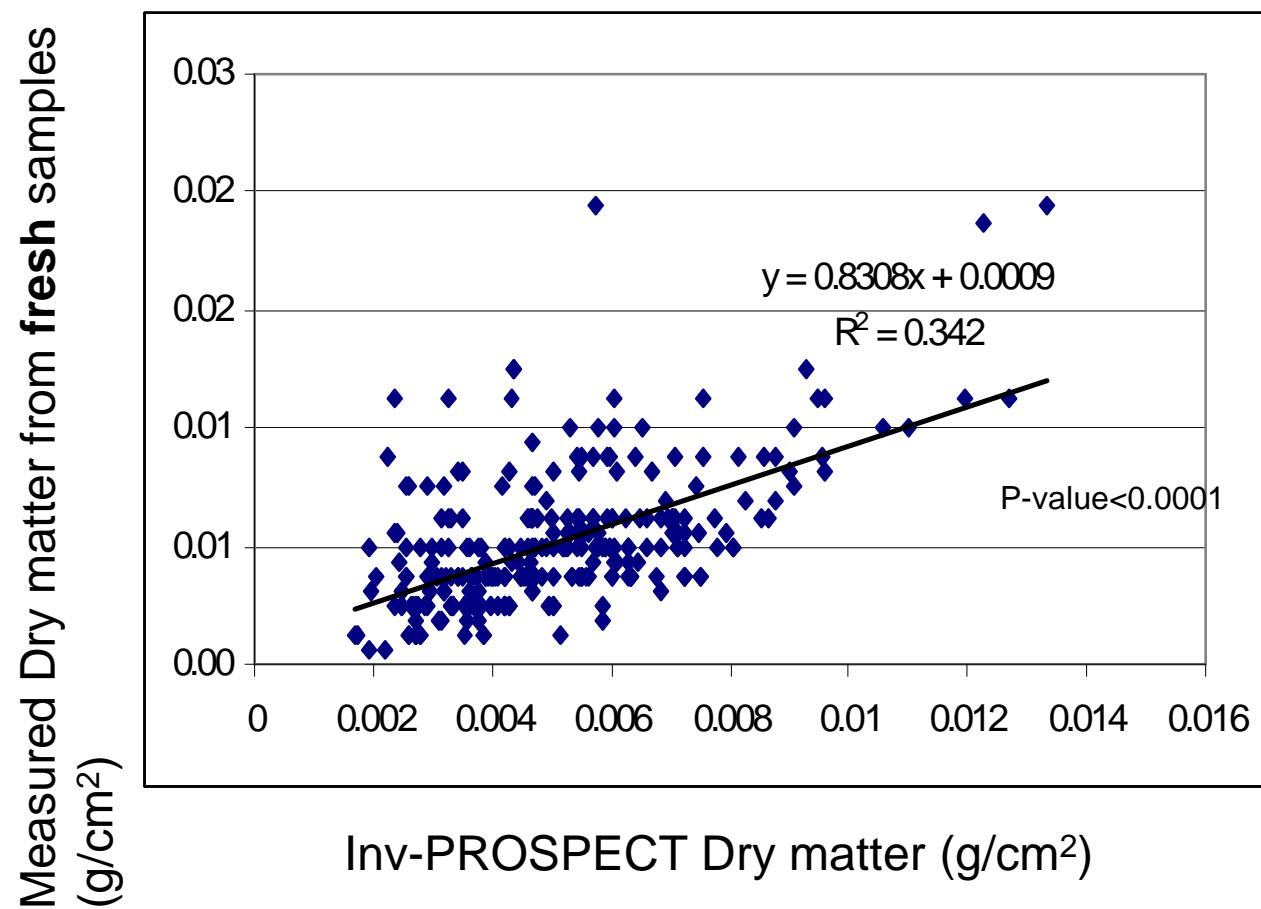

Pima Fields Only

Acala Fields Only

Estimating Fuel Moisture Content

I Dry Matter in Fresh Samples

Stephane Jacquemoud et al, 1996

Estimates of Fuel Moisture Content

- | dry matter estimated seasonally
- | water content from Water Index
